🌐 vibulan73 • 🌐 vibulan73

A Computer Science and Engineering graduate specializing in Data Science, passionate about Software Engineering and Machine Learning. Experienced in building AI/ML models and full-stack applications. Seeking opportunities to apply my technical skills in real-world projects and research.

EDUCATION

University Of Moratuwa Mar 2021 - Jul 2025
BSc. Eng. (Hons.) in Computer Science and Engineering
• Specializing in Data Science & Engineering
• Minor in Mathematics

J/Hartley College Jan 2011 - Aug 2019
Advanced Level: 3A

EXPERIENCE

Fullstack AI/ML Engineering - Intern Nov 2023 - May 2024
[iVedha Inc.](#)
-Built models using different machine learning algorithms for wine quality, house price prediction.
-Contributed to the development of an AI-driven CV creation platform XCV by designing and implementing user friendly CV templates.

SKILLS

Programming : Python | Java | JavaScript
Frameworks & Tools : React | Node.js | Express.js | Spring Boot | PyTorch | Hugging Face
Databases & Cloud : MySQL | MongoDB | AWS
ML/DL : NLP | Computer Vision
Version Control : Git | GitHub

PROJECTS

Food Delivery Platform 🔄 Jan 2026 - Present
Technologies: [Java Spring Boot](#), [Flutter](#), [PostgreSQL](#), [REST APIs](#), [Microservices](#)
Building a microservices-based food delivery ecosystem to streamline operations between customers, restaurants, and riders. I am implementing the backend API services for the Order, Restaurant, and User modules, implementing core business logic for secure user authentication, real-time order lifecycles, and dynamic menu management and a scalable PostgreSQL database schema to ensure data consistency and high performance across all services.

Applicant Tracking System (ATS) 🔄 Oct 2025 - Nov 2025
Technologies: [React](#), [Spring Boot](#), [PostgreSQL](#), [JWT](#)
Developed a full-stack Applicant Tracking System (ATS) enabling recruiters to create and manage job postings via a centralized dashboard. Implemented secure authentication and role-based access using JWT, public job application links for candidates, and end-to-end application tracking. Built features for application search, filtering, status management, and hiring analytics, with recruiter-controlled job activation/deactivation. Designed a scalable Spring Boot backend and a responsive React frontend with documented system design decisions.

Clothing Brand E-Commerce Web Application 🔄 Aug 2025 - Sep 2025
Technologies: [React](#), [Node.js](#), [Express.js](#), [MongoDB](#), [JWT](#)
Developed a full-stack e-commerce platform using the MERN stack, featuring secure user authentication, product browsing, cart management, and a mock checkout process. Designed an admin panel for product and order management, including search, filters, pagination, and automated order confirmation emails, ensuring a scalable backend and responsive React frontend.

Jul 2025 - Aug 2025

Built a full-stack To-Do application enabling users to create, read, update, and delete (CRUD) tasks. The backend, developed using Spring Boot, includes secure JWT-based authentication, PostgreSQL database integration, and well-structured RESTful APIs. The frontend, developed with plain JavaScript, interacts seamlessly with the backend to manage tasks in real time. The project focused on secure API design, proper session handling, and efficient client-server communication.

May 2024 - Jun 2025

Final Year R&D Project, Developing a resource-efficient framework for training and optimizing Tamil language models using advanced model distillation techniques. The project focuses on developing a compact and high-performance model specifically tailored for NLP tasks such as Question Answering (QA), optimized to operate efficiently on limited computational resources.

Aug 2023 - Nov 2023

Developed a multilingual chatbot leveraging RASA and an LLM-based Retrieval-Augmented Generation (RAG) system to provide medical guidance and facilitate appointment booking for Sinhala and Tamil speakers. Additionally, developed an interactive dashboard to monitor user engagement, perform sentiment analysis, and generate topic modeling summaries.

May 2023 - Jul 2023

Analyzed employee attrition for Marvelous Construction using ERP data with 997 records across 19 variables. Cleaned and processed the data to identify key factors like marital status, age group, and employment type. Proposed actionable strategies to help the CEO improve employee retention and workplace satisfaction.
